

## The best snake for beginners

Which snake is the best snake for a beginner? This question always comes up, and has many responses. Some claim that ball pythons are the best snake for a beginner hobbyist. Others say the corn snake, or king snake is the best option. From my experience, I have found all of these snakes to be easy to care for, but to narrow it down, I would say that without fail, the best beginner snake is the corn snake.

Corn snakes do not reach very long lengths, making them manageable for those without former experience. They also are great eaters and rarely deny food. Their temperaments are generally really mild and they do well with handling. They also are very hardy and compared to some of the more tropical species. Last but not least, they come in a huge variety of colors and patterns, so finding the perfect beginner snake in just about any variety you want should not be too difficult.
